HOW IT WORKS

SNS-DC™ water soluble formula displaces salts and sequesters metals that the microbes depend on to colonize. The permeability nature of SNS-DC™ causes penetration of the microbial cell wall providing preservatives and inhibitors to work on the microbes.

DIRECTIONS FOR MIXING:

Potted Plants: Mix 3-8 oz. (6 to 16 tablespoons, 90 ml to 240 ml) of SNS-DC™ to one gallon (3.79 L) of water.

Bedded Plants, Turf & Agriculture Field: Mix 3-8 oz. (6 to 16 tablespoons, 90 ml to 240 ml) of SNS-DC™ to one gallon (3.79 L) of water. Mix well. Mixed solution may be stored for one week or used immediately. Multiple applications may be necessary due to the severity of disease. SNS-DC may be used as maintenance pre-emergent disease control. Allow to dry, then culture test for disease.

FOLIAR SPRAY

Plant Site Use For All Plants & Turf (Leaves (Foliage), Stems, Stalk, Fruit and around Flowers).

Coverage Potted Plants = 1 gallon of mixed solution will cover approximately 550 square feet, No restricted entry interval (REI)=0.

Coverage Bedded & Agriculture Field Plants = 1 gallon of mixed solution will cover approximately 500 to 900 square feet dependent on sprayer droplet size requirements. Review application guide for specific crop and mixing information. Visit <http://sierranaturalscience.com/ag-products/sns-dc-cl/> for more information. No restricted entry interval (REI)=0.

Spraying/Fogging. Spray all plant parts (leaves, stems, stalk, crowns & other) Spraying lightly on top of the soil may be helpful in reducing unwanted yeast and molds. Be careful when contacting flowers as excess moisture may have unwanted effects. Always spray in the cooler part of the day or with the grow lights off.

After using the material, thoroughly wash all food contact surfaces contacted by the concentrate with soap and water. Do not use near heat or open flame. Store in cool location out of direct sunlight. Do not freeze. Wash hands thoroughly after handling.
