How it Works
 SNS-PC Natural anionic surfactant and detergent properties disrupt the insect cell structure and respiratory membranes causing the insect to dehydrate, suffocate and die. Control of the insect is due to a natural barrier that causes surface tension changes (feels unpleasant when they walk on it) for up to 3-7 days then naturally breaks down. SNS-PC™ kills eggs and larvae by coating them with a shield which causes dehydration and prevents respiration. Therefore no hatching will occur, they will just dry out.

Directions for Mixing
 Shake well before mixing. Mix 6-14 fl oz (12 to 28 tablespoons, 177 ml to 420 ml) per gallon. Solution may be used immediately or can be stored for up to 1 week prior to use.

Directions for Use: Shake Well Before Use
Foliar Spray - Plant Site Use For All Plants
 (Leaves "Foliage", Stems, Stalk, Fruit and around Flowers), **Coverage** = 1 gallon of mixed solution will cover approximately 550 square feet. No restricted entry interval (REI)=0 days.

Depending upon severity of infestation several applications may be required. If needed spray every 3-5 days until you have control of the problem. Complete coverage of all plant tissue or surface area is necessary for control. Make sure to spray under the leaves and in corners where spiders and other insects as listed hide and lay their eggs. To reduce the chance of burning do not use under direct sunlight or grow lamps. Use on a 7-14 day schedule as preventative maintenance. May be used up to the day prior to harvest.
